

eMARS 3.9 Procurement Workarounds

April 17, 2012

There are some issues that users need to be aware of and that will be fixed shortly after “go live”. A description of the issue along with its workaround are listed below. Users will be notified as these issues are resolved and the workaround methods are no longer applicable.

- 1) All Master Agreements with a primary and secondary vendors will show up on URCATS and MA Search (URSRCHMA) as separate lines. A user must select the primary vendor in order to select a catalog line to take to their order or payment. Secondary vendors do not have catalog or commodity lines associated with their record and will display no lines if they are selected. Below is a listing of Master Agreements that contain secondary vendors. The primary vendor’s name is listed to assist you in the interim.

Expiration Date	DEPT	Document ID	Document Description	Primary Vendor
6/30/12	785	1200000015	12-02 HART FREELAND ROBERTS	HART FREELAND ROBERTS INC

- 2) Another issue with using an MA with secondary vendors happens when you select the catalog or commodity line in URCATS that is associated with the primary vendor but want to submit the order to one of the authorized dealers listed as a secondary vendor. The vendor pick list is not filtered to only the vendors that are authorized secondary vendors. The user will need to search for the vendor with whom they want to place the order by searching on vendor code or vendor name in the pick list.
- 3) When creating a Delivery Order or PRC directly from URCATS, the user must select the autonumbering checkbox. It does not default to checked.
- 4) Users may see a message when they validate their procurement documents: "User ID _____ not found in IN_USER_PROFILE table." Please let the Customer Resource Center know if you see this message. The user's ID that is displayed in the message needs to be corrected.
- 5) Ky is not allowing vendors to submit online responses at this time. Users creating solicitations must be aware that when the "Prohibit online responses" and/or "restrict multiple responses per vendor TIN" are selected on the publishing tab and the document is validated the selections will deselect on the document. Users must go and reselect the boxes and revalidate in order for the selections to stay on the document. If the prohibit online responses box is not checked and the user then realizes that it posted to VSS, they are not allowed to modify the solicitation to check this box. EMARS doesn't allow you then to prohibit online responses since a vendor may have already submitted a response electronically. The user would be forced to start the solicitation process again, cancelling the old solicitation.

- 6) The quick links to Workload Management are no longer active links. The same functionality can be accessed through the PRCUID table, or directly through the procurement folder links from the header of every procurement document. (BAM- not sure if this is on payment documents?)
